

### Nerak Weise case study

Nerak Weise, based in Brecon, Powys, are manufacturers of vertical and horizontal materials-handling conveyor systems which are in use all over the world.

Following trials with Envirometal Technologies' innovative air-drying PaiKor product Nerak Weise were very happy with the results and placed an order for use with a dip tank system. Our air-drying Paikor product delivers Envirometal Technologies' innovative pretreatment system in one easy hassle-free step. Once parts are immersed in the dip tank for 90 seconds they are degreased and pretreated ready for painting. Parts are also protected against flash rust for 6 months and beyond prior to painting giving complete flexibility to Nerak Weise's production system.

As well as improved quality and flexibility switching to Envirometal Technologies' pretreatment system has resulted in a huge reduction in costs compared to their previous system due to

- minimal energy usage
- no water required
- no waste to dispose of
- no monitoring, maintenance, titration or cleaning required

Nerak Weise are enjoying all of these benefits and reaping the rewards!
